

Honeywell

TB8575 SuitePro Digital Fan Coil Thermostat

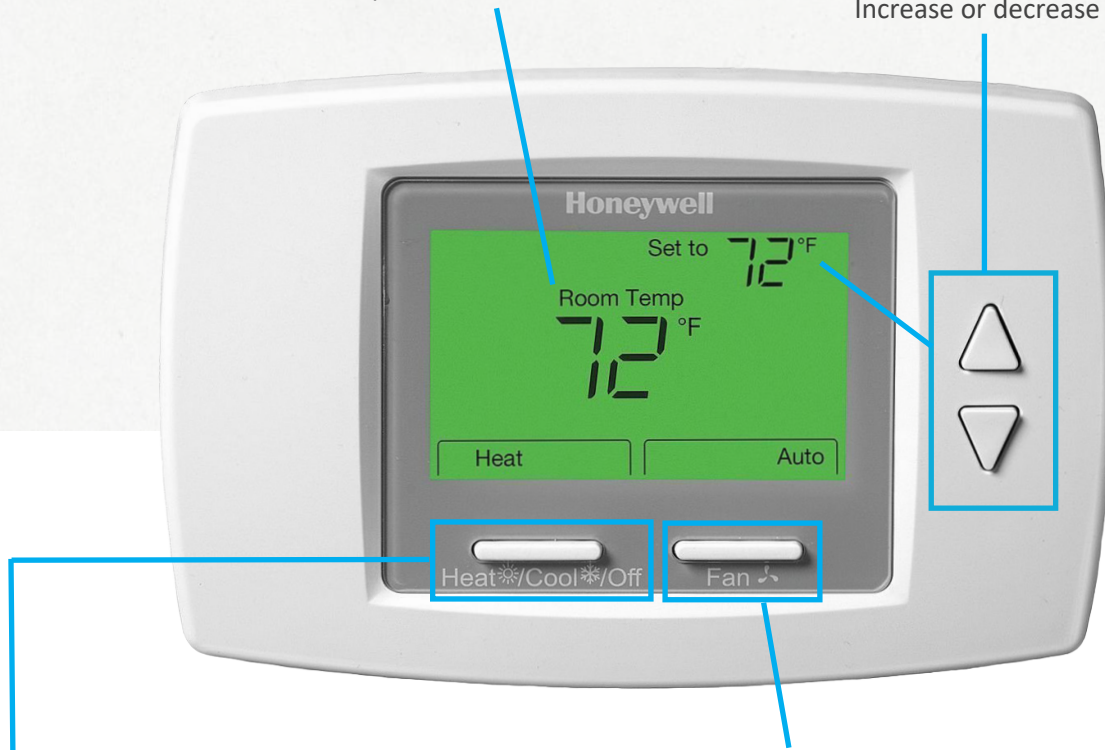

The **Honeywell SuitePro** is a digital fan coil thermostat. With its intuitive design, it is ideal for residents living in condominiums, apartments, senior's residences, and hotels.

Room Temperature

Indicates the current room temperature.

Temperature Control Buttons

Indicates the temperature you would like. Increase or decrease with arrows.

System Controls: Heat, Cool, Auto, or Off

- Select desired settings
- If **Auto** option is available, the thermostat will automatically detect whether the building is in heating or cooling season.
- Note: For most buildings cooling mode will only function in the summer and heating only in the winter.

Fan Controls: Low, Med, Hi or Auto

- **Auto**: fan speed will adjust based on difference between **Set to** temperature and **Room Temp**. The smaller the difference, the slower the fan. Once set temperature is reached, the fan will shutoff.
- **Low, Med, or Hi**: fan will run on heating or cooling at that fan speed. Once set temperature is reached, the heating/cooling will shutoff but the fan will remain on.
- Note: **Low** or **Med** speed is recommended. This will maintain desired temperature and allow air to continually circulate the suite.
- Note: Hold this button for 3 seconds to toggle between Celsius and Fahrenheit.
