

# Honeywell

## TB7100A1000 MultiPRO Thermostat

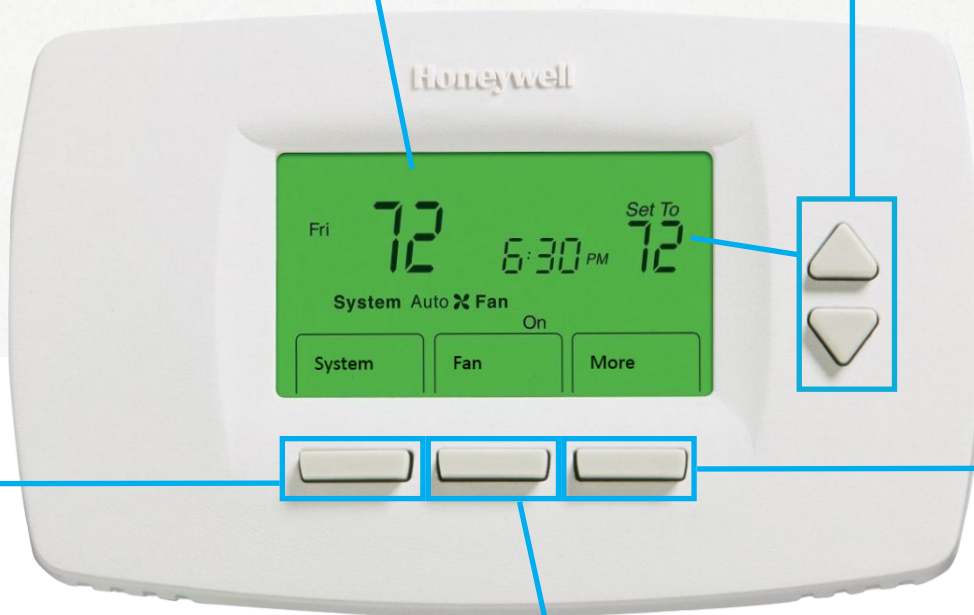

The **Honeywell MultiPRO** is an effortless thermostat that provides universal system compatibility, precise comfort and ease of use.

### Room Temperature

Indicates the current room temperature.

### Temperature Control Buttons

Increase or decrease temperature with arrows. Makes selections in other screens.

Visual of display is on non-programmable mode

### Clock & More Button

Selects time and confirms desired settings

### System Controls

- Controls which mode your system will run in
- **HEAT** - thermostat controls the heating system.
- **OFF** - both heating and cooling systems are off.
- **COOL** - thermostat controls the cooling system.
- **AUTO** - this setting will switch between both heating and cooling settings based on the variation from room temperature and desired temperature (only recommended with a 4-pipe system)

### Fan Controls: Low, Med, Hi or Auto

- **FAN ON**: runs fan constantly
- **FAN AUTO**: runs fan automatically; turns off when reached desired temperature.
- **Low, Med, or Hi**: fan will run on heating or cooling at that fan speed. Once set temperature is reached, the heating/cooling will shutoff but the fan will remain on.
- **Note: Low or Med** speed is recommended. This will maintain desired temperature and allow air to continually circulate the suite.

*\*To enter programmable mode please refer to the user manual at [www.uniluxcrfc.com/resources](http://www.uniluxcrfc.com/resources)*
