

Unilux has been Canada's largest manufacturer of fan coils for over 50 years, with our products installed in over 90% of residential buildings across Ontario. Our factory-trained technicians specialize in fan coil systems, delivering exceptional **service and maintenance** to ensure the highest standards of quality.

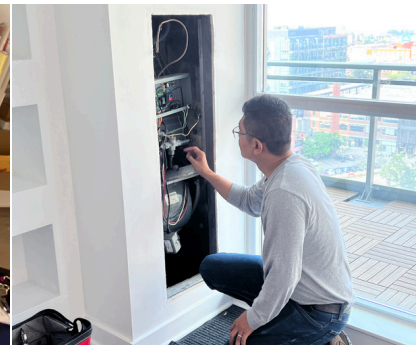

FACTORY TRAINED FAN COIL MAINTENANCE

Our 7-Step Process

Our fan coil maintenance program minimizes the risk of floods and improves indoor air quality. **Our comprehensive documentation tracks every step, protecting management from liability and ensuring peace of mind.** With all technicians factory-trained on the same floor where our fan coils are made, you can trust that your system is in expert hands.

- ✓ Install New Filter
- ✓ Flush Drain Line
- ✓ Clean Drain Pan
- ✓ HEPA Vacuum Coil
- ✓ Anti-Microbial Treatment
- ✓ Inspect Coil, Insulation, and Test Controls
- ✓ Completion and Deficiency Report

ERV/HRV SPECIALIZED MAINTENANCE

In 2008, Unilux was the first fan coil manufacturer to introduce an integrated Energy Recovery Ventilator (ERV). Regular maintenance, including filter cleaning twice a year and core change every 5 years, is essential to ensure optimal performance and prevent moisture buildup. Our trained technicians specialize in ERV/HRV systems, ensuring they operate efficiently and reliably.
